## GENESIS TOOL BOX

---

The „GD Toolbox“ (patent pending) is a service box which is embedded in the mannequin’s hip plate, closed by a hinged lid. It contains all utensils and information needed in the course of a mannequin’s life, like cleaning sponge, matching touch-up paint, gloves and assembly instructions.

The touch-up paint is a water-based correcting paint for small damages which can be shipped legally.

## CERTIFIED SUSTAINABILITY

---

We have already managed to replace 47% of the polyester our mannequins are made of by bio resin. The bio resin does not contain any petroleum; instead it is generated by natural fermentation. For the production of the resin 38 % less energy is required and 42% less greenhouse gases are produced. The hands of our mannequins are produced from non-toxic PVC. Beyond sustainable production components we also make our contribution to environmental protection by optimizing the entire process from production via transport up to delivery of the products.

## SUEDE

In our own color and surface laboratory we have developed the unique soft touch surface “Suede”. The super matt material gives the mannequins a warm, textile character and has, at the same time, an anti-slip effect. “Suede” is particularly resistant to dirt and scratches so that an additional protective varnish is no longer needed.
